LEGALEASE: AI- POWERED LEGAL DOCUMENT GENERATOR

Phase 3: Project Design Phase

The system architecture is designed to establish communication between the frontend, backend, Gemini AI, and document-formatting modules.

System Architecture

Frontend

Streamlit provides:

- User input forms
- Generate button
- Document preview
- Editing interface
- Download buttons

Backend

FastAPI handles:

- API requests
- Input validation
- Gemini communication
- Document generation requests
- Returning responses to Streamlit

AI Core

The `GeminiDocumentGenerator` is responsible for:

- Creating structured prompts.
- Sending requests to Gemini.
- Receiving generated content.
- Returning the generated legal document.

Formatting Modules

Separate modules convert the generated content into:

- TXT

- DOCX
- PDF
- HTML preview
