LEGALEASE: AI-POWERED LEGAL DOCUMENT GENERATOR

Phase 6: Project Testing Phase

This phase focuses on testing the AI, backend, document-generation, and export functionality.

Milestone 3: API Logic Integration

`main.py`

The FastAPI application is initialized in `main.py`.

The implementation includes:

- FastAPI application initialization.
- Root endpoint.
- Health-check functionality.
- Modular route inclusion.

`routes.py`

The document-generation logic is implemented in `routes.py`.

A Pydantic `DocumentRequest` model validates:

- `document_type`
- `parties`
- `terms`
- `dates`

The `/generate` POST endpoint receives the information and passes it to the Gemini document generator.

Testing Activities

The following components are tested:

- FastAPI connectivity.
- Input validation.
- Gemini API communication.
- AI document generation.
- Document structure.
- HTML preview.
- Editing functionality.
- TXT generation.
- DOCX generation.
- PDF generation.
- Download functionality.
- Error handling.
